

## Cboe Europe Indices – Notification

Vendor notification April 2020

**Publication Date: 2 April 2020**

Cboe Europe (Cboe) are currently in the process of changing how Cboe calculates and disseminates real-time Cboe Indices data. The complete list of impacted indices can be found [here](#).

Currently, Cboe utilises a third party firm to calculate and disseminate the real-time Cboe Indices. These indices are distributed directly from the Stuttgart Exchange and via licensed data vendors. Effective **Tuesday 1<sup>st</sup> December, 2020** Cboe will calculate and disseminate the indices data from the Cboe distribution platform in Equinix LD4.

### Key Milestones

Target Date	Milestone
From Wednesday April 14 <sup>th</sup>	Vendors should begin to request connectivity to the Cboe distribution platform in Equinix LD4 by contacting the <a href="#">Index Data Team</a>
July 1 <sup>st</sup> – End of November 2020	The Cboe distribution platform in LD4 will begin to calculate and disseminate indices data in parallel with the current third party solution. <b>The current third party solution should be treated as the golden source for the indices until 1<sup>st</sup> December 2020. Until then the real-time indices calculated by Cboe should be treated as test data.</b>
Tuesday 1 <sup>st</sup> December, 2020	The real time index data will only be available through the Cboe distribution platform in Equinix LD4 and the existing solution will no longer be available. <b>All vendors who wish to continue consuming real time index data need to ensure they have cutover prior to this date.</b>

Please note, there is no change to the generation and distribution of the end of day index files, currently available via FTP and the [Cboe Web Portal](#). Furthermore there are no licensing or fee changes associated with this migration.

If you currently access the data through a vendor, please ensure you will still be able to receive the data through your normal channels effective **Tuesday 1<sup>st</sup> December 2020** by checking that your vendor has successfully cutover prior to this deadline.

### Technical Specification

Cboe has published a technical specification below describing how the real-time indices can be consumed from the Cboe distribution platform.

- [Cboe Europe Multicast PITCH Specification](#) section **1.8, 4.16** and **7** contain information pertinent to Indices.

## Cboe Europe Indices – Notification

Vendor notification April 2020

The Cboe Index Data team will be working to ensure a smooth transition with minimal impact to licensees and end users. As part of this transition Cboe will be reaching out to all affected vendors over the coming weeks.

Please contact the [Index Data Team](#) if you have any immediate questions or concerns.

All current and historical Cboe Europe Index notifications are available online at <http://www.cboe.com/indexeurope/notifications>
